CODE COMPLIANT FENCE POST ANCHORING SYSTEM

*Sleeve-It units are palletized
in a stacked, nested format.*

Sleeve-It® SD-1 is a pre-engineered fence post anchoring solution for enhancing below-grade foundational stability in fences placed on top of a segmental retaining wall (SRW). Sleeve-It's patent-pending design allows stable fence footings to be integrated into the support structure of the SRW while it is being constructed. Because of its cantilevered form and other properties, using Sleeve-It during the SRW build permits a code-compliant fence to be constructed, eliminating the 36" offset requirements of IBC 1015.2.

CODE COMPLIANT

Sleeve-It is compliant with IBC 1015.2, IBC 1607.8.1 and ASCE 7 4.5.1.

MAXIMIZES LAND USE

Eliminates the offset requirement for rails and fences within 36" of the edge of the open side of an SRW.

STACKABLE AND PORTABLE

Lightweight, unitary design makes Sleeve-It easy to stack, store and transport to jobsites – reducing stocking space, shipping costs and labor requirements.

EASY TO INSTALL

Seamlessly integrates into the SRW construction process and eliminates the hassle of auguring once the wall is complete.

COMPATIBLE WITH MOST FENCES

Sleeve-It is designed to accommodate the most common SRW fence types.

RECYCLED MATERIAL

Sleeve-It is made with ~95% post-consumer recycled polypropylene.
